Let's Start!

Facing the Real Professional World

Learning Outcome:

Designs the data structure based on the database structures and its characteristics.

Validate database using the proper IT tools.

Can Do Statements:

- I can talk about previous experiences with data validation.
- I can describe how I have changed data validation practices from past experiences.

Ask your partner:

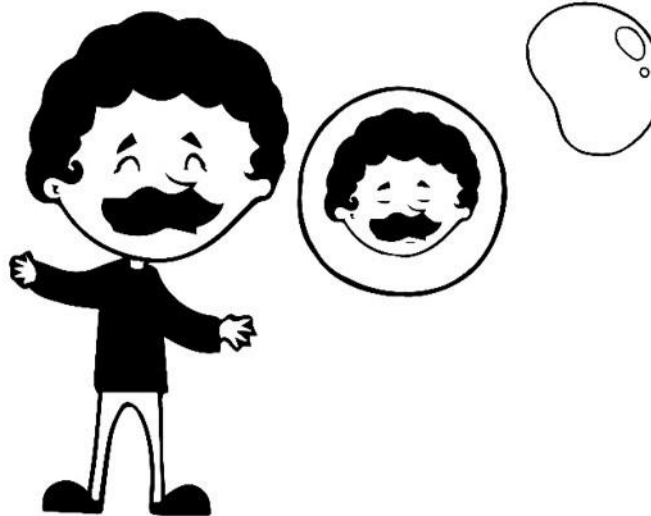

- What is the most difficult situation that you can face in your profession? Why?
- What type of situations do you consider unresolvable in your profession? Why?

Let's Explore!

Tell me about your experience working on projects.

Instructions: Read the text below.

- Frank:** This week is finally over. You cannot imagine how many issues I've had with the project we started this semester. It's been a disaster.
- Liana:** Really? What happened? Have you talked to your boss about that?
- Frank:** First of all, I didn't use to work alone in one single project and I would normally be accompanied by other five coworkers who wouldn't do other things different than help me finish all the data validation processes on time. That is why I have worked all week on my own fixing the human mistakes that all the members of a company made when they registered their clients' information.
- Liana:** What type of mistakes did you find?
- Frank:** I didn't find but spelling mistakes and incomplete required fields. I remember that I didn't use to have to face these types of problematic situations before. Now, my job has become really dull.
- Liana:** Well, in my case, the situation didn't use to be different from yours when I worked. However, I wouldn't feel as bad as you because I always attempted to use as many techniques and methods as I could to maximize my data validation processes. Whenever I was in charge of any of those projects, I would not hesitate to use early versions of the field level and the form level validations as they would prevent those mistakes from happening. Obviously, there were some other mistakes that did not use to be covered by those types of validations but, anyways, the workload wouldn't be so hefty.
- Frank:** I didn't think about that before. Now that I think about that, I haven't managed this situation in the appropriate way. Thank you for the advice.

Let's Practice!

Mistakes in the Data Validation Process

Instructions: Select the correct answers.

1. I _____ but spelling mistakes and incomplete required fields.
 - a. didn't found
 - b. didn't find
 - c. haven't find
2. I _____ to work alone in one single project.
 - a. didn't use
 - b. didn't used
 - c. haven't use
3. I _____ to face these types of problematic situations before.
 - a. didn't used to has
 - b. didn't use to has
 - c. didn't use to have
4. That is why I _____ all week on my own.
 - a. have worked
 - b. has worked
 - c. had work
5. I always _____ to use as many techniques and methods as I could to maximize my data validation processes.
 - a. attempting
 - b. attempted
 - c. attempt

Let's Practice!

Frank needs to maximize the data validation process.

Instructions: Circle the correct option to complete the sentence. Read the sentences aloud. Check your pronunciation with your instructor.

1. Frank (worked / work) with other five people in previous projects.
2. All members of the company (has made / have made) mistakes related with the registration of client's information.
3. The mistakes made in the data (was / were) usually incomplete required files and spelling mistakes.
4. Liana (has developed / have developed) techniques and methods in data validation process.
5. Frank (consider / considered) employing the same techniques and methods Liana did.

Extension Activity

Which techniques should I apply when validating data?

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Research at least two techniques to develop data validation process.
- Describe with your own words each technique and write why you consider it is important for a data validation process.
- Write a paragraph where you describe Frank's situation after he followed Liana's advice.

Self-Assessment

Yes

No

- I research about different techniques to data validation process. ☐ ☐
- I describe the development of each technique and emphasize on its importance. ☐ ☐
- I write about experiences with data validation processes following methods. ☐ ☐

Target Words

- **on my own** (expression): expression used to say that an activity is done by one person with no help from others
e.g. That is why I have worked all week on my own fixing the human mistakes that all the members of a company made when they registered their clients' information.
- **dull** (adjective): not motivating at all
e.g. I remember that I didn't use to have to face these type of problematic situations before; now, my job has become really dull.
- **attempt** (verb): the effort put to try to carry out an action
e.g. However, I wouldn't feel as bad as you because I always attempted to use as many techniques and methods as I could to maximize my data validation processes.
- **maximize** (verb): to increase or enhance something
e.g. However, I wouldn't feel as bad as you because I always attempted to use as many techniques and methods as I could to maximize my data validation processes.
- **workload** (noun): the amount of activities to do
e.g. Obviously, there were some other mistakes that did not use to be covered by those types of validations, but anyways the workload wouldn't be as hefty.
- **hefty** (adjective): heavy
e.g. Obviously, there were some other mistakes that did not use to be covered by those types of validations, but, anyway, the workload wouldn't be so hefty.

Learning Points

Present Perfect vs Past Simple

Both, the **Present Perfect** and the **Past Simple**, help us to communicate in an accurate way about different events in the past.

PRESENT PERFECT

Remember that the Present Perfect tense makes reference to events that started in the past and that continue until the moment of speaking. Furthermore, we do not know when the action will finish in the future.

For affirmative sentences, use the auxiliary verb "have" or "has" depending on the subject of the sentence. Plus, change the form of the verb to the past participle one.

For negative sentences, use the negative form of the auxiliary verb "have" or "has" and keep the verb in its past participle form.

For interrogative sentences, follow the structure (WH- question word) + have/has + subject + verb (past participle form) + complement + ?.

PAST SIMPLE

The Past Simple is used to talk about actions that started and finished in a specific moment in the past.

For affirmative sentences, just change the form of the verb depending on its type, regular or irregular.

For negative sentences, use the negative form of the auxiliary verb "did" (did not or didn't) and keep the verb in its base form.

For interrogative form, use the structure (WH- question word) + did + subject + verb (base form) + complement + ?.

Examples

- *You cannot imagine how many issues I've had with the project we started this semester. It's been a disaster.*
- *What type of mistakes did you find?*

Learning Points

Used To and Would - Negative Forms

Both, **used to** and **would**, refer to a past habit; in other words, a recurrent action in the past that no longer happens in the present.

USED TO

The negative form of this structure is "did not use to + main verb (infinitive)". In this case, you are expressing that a certain activity was not a habit in someone's or something's past.

Examples:

We **didn't use to use** that database in my last job.

She **didn't use to be** so knowledgeable about databases.

WOULD

The negative form of "would" for past habits is really easy since it is only required to add the adverb "not" after it and a main verb in the infinitive form.

Examples:

In my last job, we **wouldn't use** that database.

Five years ago, she **would not be** so knowledgeable about this.

Examples

- *First of all, I didn't use to work alone in one single project and I would normally be accompanied by other five coworkers who wouldn't do other things different than help me finish all the data validation processes on time.*
- *Well, in my case, the situation didn't use to be different from yours when I worked. However, I wouldn't feel as bad as you.*
