Documenting What a System Must Be Able to Perform

TO-DO LIST		
1	Describe	☐
2	Include	☐
3	Express	☐
4	Provide details	☐
5		☐
6		☐

Learning Outcome:

Make the coding of the system modules and the main program, starting from using the chosen programming language, based on design specifications.

Exchanges information about requirements types and their characteristics.

Can Do Statements:

- I can tell what a functional requirement should include.
- I can give examples of functional requirements.
- I can talk about how functional requirements have an incidence on business.

Ask your partner:

- How important is for businesses to meet their clients' needs?
- What type of activities does a system need to do for a business?

Let's Explore!

Albert needs to learn about functional requirements.

Instructions: Read the text below.

- Albert:** I need assistance with this. I do not know if the information here is enough and I basically cannot understand some of it.
- Mary:** Well, you had better ask Peter. He is the expert here.
- Albert:** Peter. Can you help me in here?
- Peter:** Of course. Well, those are the functional requirements. You'd better be careful with its content as it determines several aspects of the system's behavior. Now, you ought to always look for some elements like a distinctive number and name, a summary and rationale of the different behaviors of the system. Plus, you have to find all sorts of descriptions of the operations and outputs given by the system once it is fully operational. Remember that the language used here ought to be simple and comprehensible.
- Albert:** Do you have any examples?
- Peter:** Sure, you might want to check this one out. This is a requirement for an inventory of a market. With our technology, technicians and other professionals had better see entries that describe who can access the inventory and the way people will register products. Furthermore, aspects like the transportation means that will be used to bring in products, the way employers will keep track of their availability, among others, ought to be included. You ought to find as many details as possible that contribute to the accomplishment of all the objectives of the system.
- Albert:** Why is it so important to have so much detailed information?
- Peter:** Functional requirements have a strong incidence in any business. If these functional requests are not done correctly, the system will not accomplish our customer's goals or projects. For the sake of our company, every detail of the customer's goal ought to be addressed and properly met. After all, that is our responsibility.

Learning Points

Had Better for What Is Advisable

You use **had better** to share ideas with others regarding what we believe is the best action to take in a specific situation.

When you use **had better**, you are trying to give a recommendation about a present situation in which you are telling another person what to do. The use of **had better** suggests that if the other person does not follow what you propose, a bad consequence will happen.

To make sentences using **had better**, you have to follow the next structure:

Subject + **Had better** + Verb (base form) + Complement

Examples:

*You **had better** check the functional requirements.*

*The company **had better** show interest on developing good functional requirements on their systems.*

Remember that you can also use the abbreviation of **had better** which is "**d better**".

Example:

*You'**d better** check the functional requirements.*

Examples

- *Well, you **had better** ask Peter.*
- *With our technology, technicians and other professionals **had better** see entries that describe who can access the inventory and the way people will register products.*

What a Functional Requirement Should Include

Functional requirements must include specific characteristics that you have to know and identify.

When you talk about functional requirements, you make reference to the services and functions that the system must provide. The behavior of the system in different situations is also detailed through these requirements. Now, in order to accomplish a function, the functional requirements must fulfill some parameters:

Every functional requirement has to...

Have a distinctive number and name, as well as a summary and a rationale written in a non-specific language that everybody can read and understand.

Include descriptions of the information to include on the system.

Include a full and clear description, or crux, of the desired behavior or operations of the system that correspond to the needs and objectives of the company, the users and experts.

Descriptions of the work-flow of the entire system as well as other type of output.

Explanation of the way the system accomplishes the regulatory requirements.
