Let's Start!

Writing Functional Requirements in a Proper Way

Learning Outcome:

Make the coding of the system modules and the main program, starting from using the chosen programming language, based on design specifications.
Exchanges information about requirements types and their characteristics.

Can Do Statements:

- I can write tips to create good functional requirements.
- I can describe the points to be considered for creating functional requirements.
- I can explain the importance of knowing the objectives and the role I have as a requirement creator.

Ask your partner:

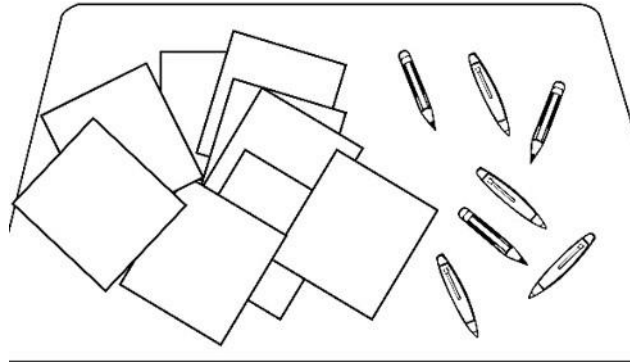

- How can you recognize a well-written functional requirement?
- Have you ever written a functional requirement? If so, did you receive any feedback? What was it?

Let's Explore!

Stop the production!

Instructions: Read the text below.

Judith: Clyde, you work next week, right?

Clyde: Well, things are not going very well there. My boss stopped production last week since we have created pretty bad functional requirements.

Judith: That is a serious matter. You are going to have to improve your writing skills at all costs. I can help you out and give you some recommendations that helped me a lot whenever I've had to write requirements.

Clyde: That is so kind of you.

Judith: I have found that there are some important tips and points to consider when you want to write good functional requirements. To start, keep the customer in mind, as that will help you to give value to your work and provide a sense of responsibility and commitment to what you do. Furthermore, be consistent with your duty and make sure that all the requirements you write are complete and not clear as mud as that will avoid any future misunderstandings and problems in the next stages of production. Plus, don't forget to prioritize the requirements and to write the most important ones first. Finally, verify that the requirements you wrote are feasible and that can be measured objectively by others.

Clyde: Wow! That was very instructive. Now I understand why we have had so much trouble at work. I am definitely telling my coworkers about those tips.

Judith: That sounds great. Now, you will have to remember all the time that as a requirement creator, you have one of the most important roles in the company as it is you who describes what the system is going to do. The client has trusted you to make sure that all the objectives and visions are met on the software that you have contributed to creating.

**Let's Practice!****Creating Functional Requirements with Clyde.**

Instructions: Complete the sentences by writing its corresponding word. Use capital letter where necessary. Use: have made, has given, wrote, have found, have had.

1. I _____ that there are some important tips and points to consider when you want to write good functional requirements.
2. Verify that the requirements you _____ are feasible and can be measured by others objectively.
3. Keep in mind the customer _____ value to the work, and it provided a sense of responsibility and commitment to what you did.
4. I have been consistent with my duty and I _____ sure that all the requirements I wrote were complete.
5. Now I understand why we _____ so much trouble at work. I am definitely telling my coworkers about those tips.

**Let's Practice!****Judith clarifies the role that Clyde is going to take.**

Instructions: Cross out the incorrect word and write in the correct word.

1. That is a serious matter. You _____ to improve your writing skills at all costs. (are going to have / is going to have)
2. You _____ to remember all the time that as a requirement creator.(will have / had)
3. You have one of the most important roles in the company as it is you who describes what the system_____.(is going to do / are going to do)
4. You _____ sure that all the objectives and visions are met on the software that you contributed to create. (is going to make / are going to make)
5. Your role _____ in each step of the process during the functional requirement creator, you had better become an expert of the process. (changing / will change)

Extension Activity

Let's improve the writing skills.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Imagine you are a requirement creator.
- Look for information about what are the main functions in your position.
- Create a brochure where you express the functions and recommendations about improve writing skills.
- Present the brochure to your instructor and answer all his questions.

Self-Assessment

Yes

No

- I look for information about requirement creator functions.
- I summarize functions and recommendations of writing skills.
- I talk about functional requirement creator functions.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **clear as mud** (expression): difficult to appreciate or understand, not precise at all
e.g. Furthermore, be consistent with your duty and make sure that all the requirements you write are complete and not clear as mud as that will avoid any future misunderstandings and problems in the next stages of production.
- **prioritize** (verb): to line up elements according to its importance or relevance
e.g. Plus, don't forget to prioritize the requirements and to write the most important ones first.
- **matter** (noun): a particular situation
e.g. That is a serious matter.
- **at all costs** (expression): to put effort without measuring it
e.g. You must improve your writing skills at all costs.
- **instructive** (adjective): of great importance and utility
e.g. The information you gave me is very instructive, I can improve my writing skills now.
- **commitment** (noun): the decision to put the effort and energy into something giving the best
e.g. To start, keep the customer in mind as that will help you to give value to your work and provide a sense of responsibility and commitment to what you do.

Learning Points

Present Perfect Versus Past Simple - Review

You use the **Present Perfect** as well as the **Past Simple** on a daily basis. They are important to express yourself in a natural way about events that took place in the past.

PRESENT PERFECT

Using the **Present Perfect** implies the idea that the event you are making reference to started in an unknown moment in the past and it continued until the present. Plus, you do not know when this event or action will finish.

Remember that there is an auxiliary verb, *have* or *has*, which is needed in this tense and that changes according to the pronoun. Plus, the verbs have to be conjugated in the past participle form.

Example:

*I understand why we **have had** so much trouble at work.*

SIMPLE PAST

Using the **Simple Past** tense implies the idea that the event or action that you are making reference to started and finished in a specific moment in the past. It is no longer happening in the present.

Remember that depending on the type of the verb, regular or irregular, it will change in its Simple Past form. Plus, the interrogative and negative form must include the auxiliary verb "did".

Example:

*Verify that the requirements you **wrote** are feasible*

Examples

- *My boss stopped production last week since we have created pretty bad functional requirements.*
- *Wow, that was very instructive.*

Learning Points

Tips to Write Good Functional Requirements

For any software organization, it is important that its employees write functional requirements in an appropriate way. Doing so will benefit the company, the project and the worker.

Clearly written requirements are extremely important as they can be a key to a successful and flawless project. In order to master the writing of good functional requirements, there are some important tips you have to keep in mind.

TIP	EXPLANATION
Keep the customer in mind	Think about the expectations that the customer has in terms of the goals and visions that will be met with the software.
Complete and be clear	Make sure that you write all the different requirements in a complete way, without omitting any detail or piece of information. Double check them and remember to be as clear as possible in order to avoid any confusion.
Prioritize	There are clear differences among the different requirements and undoubtedly some of them will be more important than others. Thus, line up those requirements that are more important so they can be written and developed first.
Verify	Make sure that the requirement you are writing can be measured and objectively verified by others.

Example

- To start, keep the customer in mind as that will help you to give value to your work and provide a sense of responsibility and commitment to what you do.*
